Roanoke Valley Governor's School for Science and Technology RVGS Physics

Last updated: June, 2022

RVGS Physics is the introductory science course for all first-years students. Topics include motion, forces, momentum, work, and energy. A focused approach allows students to develop a deep factual, conceptual, mathematical, and procedural knowledge of fundamental physics concepts. Skills in technology, statistics, data collection, and experimentation are reinforced by lab activities throughout the course. The primary goals of the course are to improve problem solving skills, correct basic preconceptions about physics, and build a "big picture" foundation for future higher level science courses

This course is taught using best practices in gifted education. Each competency is aligned with Hockett's five principles of gifted education:

<u>Gifted Education Principles</u>:

(Hockett, J.A. (2009) "Curriculum for Highly Able Learners That Conforms to General Education and Gifted Education Quality Indicators." *Journal of Education for the Gifted*. Vol. 32, No. 3, p. 394-440)

- **1.** High-quality curriculum for gifted learners uses a conceptual approach to organize or explore content that is discipline based and integrative.
- **2.** High-quality curriculum for gifted learners pursues advanced levels of understanding beyond the general education curriculum through abstraction, depth, breadth, and complexity.
- **3.** High-quality curriculum for gifted learners asks students to use processes and materials that approximate those of an expert, disciplinarian, or practicing professional.
- **4.** High-quality curriculum for gifted learners emphasizes problems, products, and performances that are true to life, and outcomes that are transformational.
- **5.** High-quality curriculum for gifted learners is flexible enough to accommodate selfdirected learning fueled by student interests, adjustments for pacing, and variety.

External standards from Virginia physics Standards of Learning were referenced when reviewing these competencies. To the right of each Enabling Objective is notation indicating alignment with external standards and a relative priority/proficiency rating from A (highest) to D (lowest).

COMPETENCY I

Students will apply certain basic skills to represent and communicate scientific concepts *Enabling Objectives:*

1. Develop a qualitative model PH.1 C, E 2. Identify dependent and independent variables PH. 1 A A 3. Make and communicate predictions about variable relationships PH. 1 4. Select appropriate measuring devices PH.1 B B 5. Communicate accuracy and precision of measurements related to means and standard deviations C, E, F 6. Appropriately use significant figures Exceeds Standard T. Understand the differences and relationships between dimension and units Standard 8. Understand how to use the metric prefixes Exceeds 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH.1 C
2. Identify dependent and independent variables PH. 1 3. Make and communicate predictions about variable relationships PH. 1 4. Select appropriate measuring devices PH.1 5. Communicate accuracy and precision of measurements related to means and standard deviations PH. 1 6. Appropriately use significant figures Exceeds Standard 7. Understand the differences and relationships between dimension and units Standard 8. Understand how to use the metric prefixes Exceeds Standard 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1
A 3. Make and communicate predictions about variable relationships PH. 1 4. Select appropriate measuring devices PH.1 B PH.1 5. Communicate accuracy and precision of measurements related to means and standard deviations PH. 1 6. Appropriately use significant figures Exceeds 7. Understand the differences and relationships between dimension and units Standard 8. Understand how to use the metric prefixes Exceeds 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C
A 3. Make and communicate predictions about variable relationships PH. 1 4. Select appropriate measuring devices PH.1 B PH.1 5. Communicate accuracy and precision of measurements related to means and standard deviations PH. 1 6. Appropriately use significant figures Exceeds 7. Understand the differences and relationships between dimension and units Standard 8. Understand how to use the metric prefixes Exceeds 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C
relationships F 4. Select appropriate measuring devices PH.1 B 5. Communicate accuracy and precision of measurements related to means and standard deviations PH. 1 6. Appropriately use significant figures Exceeds 7. Understand the differences and relationships between dimension and units Standard 8. Understand how to use the metric prefixes Exceeds 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C
4. Select appropriate measuring devices PH.1 B 5. Communicate accuracy and precision of measurements related to means and standard deviations PH.1 C, E, F 6. Appropriately use significant figures Exceeds Standard 7. Understand the differences and relationships between dimension and units Exceeds Standard 8. Understand how to use the metric prefixes Exceeds Standard 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All Standard 11. Graph tabular data PH.1
B 5. Communicate accuracy and precision of measurements related to means and standard deviations PH. 1 C, E, F 6. Appropriately use significant figures Exceeds 7. Understand the differences and relationships between dimension and units Exceeds 8. Understand how to use the metric prefixes Exceeds 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C
B 5. Communicate accuracy and precision of measurements related to means and standard deviations PH. 1 C, E, F 6. Appropriately use significant figures Exceeds 7. Understand the differences and relationships between dimension and units Exceeds 8. Understand how to use the metric prefixes Exceeds 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C
related to means and standard deviations C, E, F 6. Appropriately use significant figures Exceeds 7. Understand the differences and relationships between dimension and units Exceeds 8. Understand how to use the metric prefixes Exceeds 9. Convert between units algebraically Exceeds Standard 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C
related to means and standard deviationsC, E, F6. Appropriately use significant figuresExceeds Standard7. Understand the differences and relationships between dimension and unitsExceeds Standard8. Understand how to use the metric prefixesExceeds Standard9. Convert between units algebraicallyExceeds Standard10. Evaluate the resulting units of an algebraic expressionAll Standard11. Graph tabular dataPH. 1 C
Standard7. Understand the differences and relationships between dimension and unitsExceeds Standard8. Understand how to use the metric prefixesExceeds Standard9. Convert between units algebraicallyExceeds Standard10. Evaluate the resulting units of an algebraic expressionAll Standard11. Graph tabular dataPH. 1 C
Standard7. Understand the differences and relationships between dimension and unitsExceeds Standard8. Understand how to use the metric prefixesExceeds Standard9. Convert between units algebraicallyExceeds Standard10. Evaluate the resulting units of an algebraic expressionAll Standard11. Graph tabular dataPH. 1 C
dimension and unitsStandard8. Understand how to use the metric prefixesExceeds Standard9. Convert between units algebraicallyExceeds Standard10. Evaluate the resulting units of an algebraic expressionAll Standard11. Graph tabular dataPH. 1 C
8. Understand how to use the metric prefixes Exceeds 9. Convert between units algebraically Exceeds 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C C
9. Convert between units algebraically Exceeds 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C C
9. Convert between units algebraically Exceeds 10. Evaluate the resulting units of an algebraic expression All 11. Graph tabular data PH. 1 C C
Standard 10. Evaluate the resulting units of an algebraic expression All Standard 11. Graph tabular data PH. 1 C
Standard 10. Evaluate the resulting units of an algebraic expression All Standard 11. Graph tabular data PH. 1 C
11. Graph tabular data Standard C C
11. Graph tabular dataPH. 1C
С
12. Qualitatively interpret graphs PH.1
f
13. Calculate and qualitatively interpret slopes and intercepts PH.1
of linear graphs C, E
14. Derive algebraic models from linear graphs PH.1
С, Е
15. Qualitatively interpret the story told by the algebraic PH.1
model
16. Write a clear summarized communication of a scientific PH.1
investigation F

COMPENTENCY II

Students will be able to use technology effectively in RVGS Physics

Enabling Objectives:

0	- J - 1		
	1.	Create word-processed document by controlling:	Exceeds
		a) formatting (e.g. fonts, margins, text-wrapping,	Standard
		subscripts, superscripts, tables)	
		b) graphics (e.g. graphs, equations)	
		c) saves and prints (e.g file format, pdf, file location)	
			D 11.4
	2.	Create spreadsheets by controlling:	PH.1
		a) formats of the cell (e.g. font format, type (e.g.	С
		number), orientation)	
		b) formulas, including macros	
		c) graphs of data	
-	3.	Create appropriately formatted graphs using Excel/Logger	PH.1
		Pro/ Other Graphing Programs	С
	4.	Log onto the RVGS Canvas site and use the resources for	Exceeds
		that class.	Standard
	5.	Use a computer interface connected to a variety of sensors	PH.1 B
		to collect data for interpretation.	

COMPETENCY III

Students will develop a particle model of constant velocity

Enabling Objectives:

$0 \circ 0 j \circ 0$		
1.	Choose origin and positive direction for a system	PH.2
	·	А, В
2.	Define motion relative to frame of reference	PH.2
		А, В
3.	Distinguish between vector and scalar concepts	PH. 2
	•	А
4.	Derive linear relationships of constant velocity position	PH.2
	graphs	А, В
5.	Connect constant velocity to Newton's First Law of	PH. 3
	motion	А
6.	Connect motion graphs and vectors	PH. 2
		А, В
7.	Relate graphical, algebraic and diagrammatic	PH. 2
	representations of constant velocity	А, В
8.	Use appropriate units for kinematical properties through	PH. 2
	the use of dimensional analysis	

COMPETENCY IV Students will develop a particle model of uniform acceleration

Enabling Objectives:

18 00 900		
1.	Contrast graphs of objects travelling with constant velocity	PH.1
	and those undergoing constant acceleration	С
		PH.2
		А
2.	Contrast motion diagrams of objects travelling with	PH.1
	constant velocity and those undergoing constant	С
	acceleration	PH.2
		А
3.	Define instantaneous velocity as the slope of a tangent to a	PH.2
	curve at a distinct time in a position vs. time graph.	А, В
4.	Distinguish between instantaneous and average velocity	PH.2
		А
5.	Define acceleration with its vector nature	PH.2
		А
6.	Relate and convert from graphs of position, velocity, and	PH.1
	acceleration using basic ideas of calculus from slopes and	С
	areas (differentiation and integration)	PH.2
	、 C /	А, В
7.	Derive linear and quadratic relationships of uniform	PH.1
	acceleration from position and velocity graphs.	С, Е
		PH.2
		А, В
8.	Learn strategies for solving quantitative motion problems	PH. 2
	using the kinematics equations of uniform acceleration	А, В
9.	Apply uniform acceleration concepts to objects undergoing	PH.2
	free-fall in one dimension	А, В

COMPETENCY V

Students will develop a free particle model of inertia and force interactions. *Enabling Objectives:*

1.	Develop the notion that force is required to change	PH.3
	velocity, not to produce motion via Newton's First Law	А
2.	Recognize that constant velocity does not require an	PH.3
	explanation	А
3.	Identify specific forces acting on an object	PH.3
4.	Draw and use accurate free-body diagrams	PH.3
5.	Understand the connection between unbalanced forces,	PH.3
	inertia and acceleration via Newton's Second Law	А
6.	Learn and apply strategies for solving quantitative force	PH.3
	and motion problems	А
7.	Identify action/reaction pairs of forces as an application of	PH.3
	Newton's third law.	А
8.	Convert between graphs of Force and graphs of motion	PH.3
		А

COMPETENCY VI

Students will develop a two dimensional particle model of motion.

1.	Relate and convert graphs of position, velocity, and	PH.2
	acceleration in two dimensions simultaneously.	A, D
2.	Solve problems involving uniform acceleration in one	PH.2
	dimension and constant velocity in another	A, D
3.	Contrast motion diagrams involving uniform acceleration	PH.2
	in one and two dimensions	A, D
4.	Apply to two dimensional free fall and projectile motion	PH. 2
	problems	D
5.	Apply to two dimensional circular motion problems	PH.2
		С
6.	Distinguish between speed and velocity in terms of circular	PH.2
	motion	С
7.	Identify centripetal acceleration as the radial component of	PH. 2
	an acceleration of an object moving in a circle	С

COMPETENCY VII

Students will develop a model of impulse and momentum

1.	Apply previous reasoning from the new perspective of	PH. 4
	impulse and momentum	А
2.	Learn what is meant by an isolated system	PH.1
		А
3.	Distinguish between momentum and velocity as well as	PH. 4
	impulse and force	А
4.	Identify inelastic collisions and isolated systems	PH.4
		А
5.	Convert between Impulse, momentum, force, and motion	PH.4
	graphs of two objects.	А
6.	Learn and apply strategies for solving quantitative	PH. 4
	problems using the conservation of momentum	А
7.	Understand how impulse is the action necessary to change	PH.4
	the momentum of an isolated system	А

COMPETENCY VIII

Students will develop a model of work and energy

1.	Develop a concept of energy in terms of its transformation	PH.1
	within and transfer to and from an isolated system to its	А
	environment	PH.4
		В
2.	Develop a concept of potential energy in terms of work	PH.4
	done by conservative forces (gravitational, spring, and	В
	electrostatic)	
3.	Apply conservation of energy to elastic collisions	PH. 4
		В
4.	Learn and apply strategies for solving quantitative	PH. 4
	problems using the conservation of energy	В
5.	Identify if work is being done to an isolated system	PH. 4
		В
6.	Identify internal and external forces with respect to an	PH. 4
	isolated system	В
7.	Define power as the rate of energy transfer	PH. 4
		В

COMPETENCY IX

Students will develop a model of Electrical Circuits

1.	Develop an understanding of the relationship between	PH. 8
	Voltage, Current, and Resistance.	В
2.	Identify series and parallel circuits and how they affect	PH. 8
	Voltage, Current, and Resistance	С
3.	Identify the components of basic circuits and each parts	PH. 8
	role within the circuit.	А
4.	Demonstrate the ability to measure voltage and current in a	PH. 8
	circuit.	А, В, С
5.	Be able to build circuits from schematics using	PH. 8
	breadboards, LED's, Resistors, switches	А
